Michigan Geographic Framework (MGF) is a project of the Michigan Department of Transportation (MDOT) and the Michigan State Office of Geographic Information Systems (MOSGIS). The MGF is a collaborative effort between MDOT and MOSGIS to create a consistent and accurate geographic framework for the state of Michigan. The MGF is used to support a wide range of applications, including transportation planning, land use planning, and environmental management. The MGF is a dynamic system that is updated regularly to reflect changes in the state's geography. The MGF is a valuable resource for anyone interested in the geography of Michigan.
